Final Project Enhancement Report

School Website + Integrated ERP Management System

Consolidated Development Requirements | Website, ERP, Academic Management, Communication & Digital Marketing

Project Objective

The objective is to develop a modern, professional, fully dynamic School Website integrated with a comprehensive ERP Management System. The platform should provide centralized management for the school administration while offering dedicated functionality for Super Admin, Admin, Teachers, Students, Parents/Guardians, and other authorized users.

The complete system should be functional, responsive, secure, and professionally designed. All website content, images, videos, documents, academic records, and other information should be manageable through the respective panels without requiring direct code modifications.

The following requirements consolidate the earlier development instructions and all newly requested enhancements.

1. Complete Dynamic Website Management Through Admin Panel

The entire public-facing website must be dynamically controlled through the Admin Panel.

Whatever visitors see on the website should be editable from the backend, including:

- Homepage banners, sliders, headings, and descriptions.
- School logo, images, videos, and promotional content.
- About Us, Vision, Mission, and Principal's Message.
- Infrastructure, facilities, and achievements.
- Academic information, classes, and curriculum.
- Faculty and staff profiles.
- News, events, announcements, and notices.
- Photo galleries and video galleries.
- Testimonials and student success stories.
- Contact information, social media links, and location.
- Admission information, downloadable forms, and important documents.

Important requirement: Do not leave any major website section hardcoded. Provide dedicated editors for each section so authorized administrators can add, edit, update, publish, unpublish, and delete content.

BWORLD

2. Professional Website Design & Image Gallery

The landing page should look attractive, modern, educational, and trustworthy. It should create a strong first impression for parents and prospective students.

Use high-quality, relevant images throughout the website rather than relying heavily on plain text sections.

Recommended homepage sections:

1. Hero banner with professional school photography.
2. About the School.
3. Principal's Message.
4. Why Choose Our School?
5. Academic Programs and Classes.
6. School Infrastructure and Facilities.
7. Smart Classrooms and Laboratories.
8. Sports and Extracurricular Activities.
9. Faculty and Teaching Staff.
10. Student Achievements.
11. Latest News and Announcements.
12. Upcoming Events.
13. Parent Testimonials.
14. Photo and Video Gallery.
15. Admission Open Section.
16. Download Admission Form.
17. Contact and Location.

Photo and Video Gallery

Implement a dedicated gallery management system.

- Category-wise photo albums.
- Annual functions and celebrations.
- Sports activities.
- Cultural programs.
- Classroom activities.
- Educational trips.
- Laboratory and practical sessions.
- School infrastructure.
- Student achievements.
- Video gallery with YouTube or other supported video links.
- Full-screen image viewing.
- Mobile-friendly gallery layout.
- Admin-side image upload, replacement, deletion, and categorization.

Use optimized images with thumbnails and lazy loading to maintain website performance.

B2WORLD

3. Admission Management & Downloadable Admission Forms

Implement a complete admission management system accessible from both the public website and Admin Panel.

Public Website Features

Visitors and parents/guardians should be able to:

- View admission eligibility and procedures.
- Download the official admission application form in PDF format.
- Print the admission form.
- Submit online admission enquiries.
- Apply for admission online.
- Upload required student documents.
- Check admission application status.
- Receive an application/reference number.

The admission form must have a professional school-branded layout, including the school logo, name, address, contact information, student details, guardian details, academic information, document checklist, and declaration section.

Admission Enquiry Popup

Display an admission enquiry popup on the landing page when visitors open the website.

Include parent name, student name, mobile number, email, class applying for, and enquiry message.

The popup should be configurable through the Admin Panel, with controls for frequency, visibility, and content. Submitted enquiries must appear in the admission dashboard.

B2WORLD

4. Professional Student & Teacher ID Card Generation

Implement a centralized ID Card Management System for students and teachers.

New feature – mandatory

Student ID Cards

The system should automatically generate professional student identity cards using information already available in the Student Panel.

Include:

- School logo and official name.
- Student photograph.
- Student full name.
- Admission/Registration Number.
- Class and Section.
- Roll Number.
- Academic Session.
- Date of Birth, if required.
- Blood Group, if provided and authorized.
- Parent/Guardian Contact Number.
- School Address and Contact Details.
- QR Code or Barcode for student verification.
- Principal's signature or authorized stamp.

Teacher & Staff ID Cards

Generate separate professional ID cards for teachers and staff.

Include:

- School logo and name.
- Employee photograph.
- Full Name.
- Employee ID.
- Designation.
- Department.
- Joining Date.
- Contact Details, if required.
- QR Code for verification.
- Authorized signature and school stamp.

B2WORLD

ID Card Management Functionality

- Generate individual ID cards.
- Generate bulk ID cards class-wise.
- Generate all teacher and staff ID cards.
- Download individual ID cards in PDF format.
- Bulk download in print-ready PDF format.
- Front and back ID card templates.
- Editable ID card templates through Admin Panel.
- Print-friendly layouts with correct dimensions.
- Re-generate cards whenever student or employee details change.

Students and teachers should also be able to view and download their own ID cards from their respective panels, subject to permissions.

5. Admit Card Generation, Download & Printing

Implement a complete Admit Card Management Module for examinations.

Students must be able to view, download, and print their examination admit cards through their Student Panel.

Guardians should also be able to access their child's admit card through the Parent/Guardian Panel.

Admit Card Details

- School logo and official name.
- Student photograph.
- Student name.
- Admission number.
- Class and Section.
- Roll Number.
- Examination name.
- Academic session.
- Examination timetable.
- Subject-wise examination dates.
- Examination timings.
- Examination centre or room number.
- Important examination instructions.
- Principal's signature and school stamp.
- QR Code or verification number, where appropriate.

B2WORLD

Admin & Teacher Functionality

- Create examination schedules.
- Generate admit cards individually or in bulk.
- Preview before publishing.
- Publish or unpublish admit cards.
- Allow PDF downloads.
- Provide print functionality.
- Track generated and published admit cards.

Admit cards should only become available to eligible students after the authorized examination team publishes them and completes any required clearance checks.

6. Examination, Question Paper & Online Quiz Management

Implement a comprehensive Examination and Assessment Management System.

Teachers should be able to create, upload, conduct, evaluate, and publish examinations through their Teacher Panel.

Question Paper Management

Provide a dedicated question editor where teachers can type questions directly or upload question papers.

Supported question types should include:

- Multiple Choice Questions (MCQs).
- Multiple Select Questions.
- True/False.
- Fill in the Blanks.
- Short Answer Questions.
- Long Answer Questions.
- Descriptive Questions.
- Match the Following.
- Numerical Questions.
- File/document-based questions.

Teachers should be able to:

- Create question banks.
- Organize questions by subject, chapter, and difficulty.
- Assign marks to each question.
- Add images, diagrams, and attachments.
- Set examination duration.
- Set maximum marks and passing marks.
- Create question papers.

EDWORLD

- Preview question papers before publishing.
- Save drafts and reuse questions.
- Randomize questions and answer options where appropriate.

Online Examination & Quiz Functionality

Implement an online assessment module where teachers can create and schedule quizzes and examinations.

Students should be able to:

- Access assigned examinations.
- Read examination instructions.
- Attempt questions online.
- Submit answers.
- View remaining examination time.
- Receive submission confirmation.

Include examination start/end times, automatic submission when time expires, and safeguards against duplicate submissions.

Answer Evaluation & Marks Entry

Teachers should have an evaluation dashboard where they can:

- Review student submissions.
- Check descriptive answers manually.
- Assign marks question-wise.
- Add remarks and feedback.
- Save evaluation drafts.
- Finalize marks.
- Publish results after authorization.

Objective questions should support automatic evaluation wherever possible, while descriptive answers should be manually checked by teachers.

Student & Guardian Result Visibility

After the teacher completes the evaluation and the authorized administrator approves publication:

- Students can view their marks.
- Guardians can view their child's marks.
- Subject-wise performance becomes visible.
- Teachers can provide feedback.
- Students can download their results and report cards.

Results should remain private and accessible only to authorized users.

BYJU'S

7. Professional Marksheet & Report Card Generation

Develop a professionally designed, school-branded Marksheet and Report Card Generation System.

New feature – mandatory

The marksheet should look like an official academic document, not a basic generated table.

Professional Marksheet Design

Every marksheet should include:

- School logo and official name.
- School address and contact information.
- Academic session.
- Examination name.
- Student photograph, if required.
- Student full name.
- Admission Number.
- Roll Number.
- Class and Section.
- Father's and Mother's/Guardian's Name.
- Subject-wise marks obtained.
- Maximum marks for each subject.
- Practical and theory marks, where applicable.
- Total marks obtained.
- Overall percentage.
- Grade and division.
- Pass/Fail status.
- Subject-wise remarks.
- Attendance percentage.
- Class teacher's remarks.
- Principal's remarks.
- Date of issue.
- Principal's signature.
- Class teacher's signature.
- Official school stamp.

Marksheet Template Management

The Admin Panel should provide a dedicated marksheet editor.

Administrators should be able to:

- Upload or replace the school logo.
- Customize the marksheet layout.

EDWORLD

- Add the official school stamp.
- Configure signature sections.
- Customize colors, fonts, borders, and headings.
- Configure grading systems.
- Set subject-wise maximum marks and passing criteria.
- Configure examination-specific templates.
- Preview marksheets before publishing.

Marksheet Download & Printing

- Download individual marksheets as PDF.
- Generate class-wise marksheets in bulk.
- Print marksheets in professional A4 format.
- Provide digital verification numbers or QR codes.
- Maintain historical marksheets for previous academic sessions.
- Allow students and guardians to download published marksheets.
- Allow authorized administrators to regenerate corrected marksheets.

Important: Marksheets should be generated from verified examination records. Once published, any changes must be tracked through an authorized correction process with an audit history.

8. Student, Parent/Guardian & Teacher Panels

Implement separate dashboards with role-based permissions.

A. Student Panel

Students should have access to:

- Personal profile and academic details.
- Digital student ID card.
- Admission details.
- Class timetable.
- Attendance records.
- Homework and assignments.
- Online examinations and quizzes.
- Examination schedules.
- Admit card download and printing.
- Results and marksheets.
- Library books and issue history.
- Fee payment status and receipts.
- Study materials and uploaded notes.
- School notices and announcements.
- Internal chat and meeting schedules.
- Academic performance dashboard.

BZWORLD

B. Parent/Guardian Panel

Parents and guardians should have a dedicated dashboard to monitor their child's academic activities.

Features should include:

- Child's profile and school details.
- Student ID card access, where authorized.
- Attendance monitoring.
- Examination schedules.
- Admit card download and printing.
- Result and marksheet download.
- Homework and assignments.
- Fee details and online payment.
- Payment receipts.
- Teacher communication.
- School notices and announcements.
- Parent-teacher meeting schedules.
- Meeting joining links.
- Admission and document information.
- Notifications and reminders.

If a parent has multiple children studying in the same school, the system should support multiple student profiles under one guardian account.

C. Teacher Panel

The Teacher Panel should provide all tools required for academic and administrative activities.

Teachers should be able to:

- Manage their assigned classes and subjects.
- View student lists and profiles.
- Mark student attendance.
- Upload homework and assignments.
- Create quizzes and examinations.
- Type questions or upload question papers.
- Evaluate student submissions.
- Enter and update marks.
- Add student feedback and remarks.
- Generate draft report cards for approval.
- View academic performance reports.
- Manage class timetables.
- Upload notes, PDFs, videos, and study materials.
- Communicate with students and guardians.
- Schedule parent-teacher meetings.
- Manage their own profile and digital ID card.
- Access internal meetings and communication.

B2WORLD

9. Internal Chat, Messaging & Meeting Management

New feature – mandatory

Implement a centralized Internal Communication System across all authorized panels.

The objective is to allow school administrators, teachers, students, and guardians to communicate through the ERP without depending entirely on external messaging applications.

Internal Chat Functionality

Provide different communication options:

One-to-One Chat

- Super Admin to Admin.
- Admin to Teacher.
- Teacher to Student.
- Teacher to Guardian.
- Admin to Guardian.
- Other authorized role combinations.

Group Chat

- Class-wise groups.
- Teacher and subject groups.
- Department-wise staff groups.
- School administration groups.
- Parent-teacher groups.
- Meeting-related groups.

Chat Features

- Real-time messaging.
- Text messages.
- Image and document sharing.
- PDF and file attachments.
- Read receipts and delivery status.
- Message timestamps.
- Searchable chat history.
- Unread message indicators.
- Notifications for new messages.
- Message reporting and moderation.
- Role-based communication permissions.

B2WORLD

Super Admin Communication Monitoring

The Super Admin should have centralized access to the internal communication system.

Provide a dedicated communication management dashboard where the Super Admin can:

- View authorized communication records.
- Search chats by user, role, department, or date.
- Filter conversations by student, teacher, guardian, or administrator.
- Access group conversation records.
- Export authorized conversation records in PDF or CSV format.
- Review reported conversations.
- Maintain communication audit logs.
- Manage user communication permissions.

Privacy and security requirement: Clearly inform users that official school communication is recorded and may be reviewed by authorized administrators under school policy. Restrict access to confidential conversations, maintain audit logs of administrative access, and apply appropriate data retention policies. Super Admin access should not mean unrestricted access to private credentials or deleted content.

Google Meet Integration

Integrate Google Meet for online meetings and virtual parent-teacher interactions.

Required functionality:

- Create meetings from the ERP.
- Generate Google Meet joining links.
- Schedule meetings with date and time.
- Invite selected teachers, parents, guardians, and students.
- Display upcoming meetings in respective dashboards.
- Send meeting reminders.
- Allow users to join directly from the ERP.
- Maintain meeting schedules and participation records where supported.

Google Calendar Integration

Integrate Google Calendar using the appropriate Google Calendar API and OAuth 2.0 authorization.

Features:

- Schedule parent-teacher meetings.
- Create examination-related events.
- Schedule academic activities.
- Manage staff meetings.
- Add events to authorized users' calendars.
- Sync meeting dates and times where permissions allow.
- Send calendar invitations and reminders.

BENORD

- Display an integrated calendar inside the ERP.

The school should have the option to configure its official Google Workspace account for these integrations.

10. Admission, Document & Download Centre

Create a centralized Download Centre accessible from the relevant website and ERP panels.

Public visitors and guardians should be able to download publicly available documents.

Students and guardians should be able to download their personal academic documents after authentication.

Public Download Centre

- Admission application form.
- School prospectus.
- Fee structure.
- Academic calendar.
- School guidelines.
- Uniform information.
- Holiday list.
- Other official school documents.

Student/Guardian Download Centre

- Student ID card.
- Examination admit cards.
- Examination marksheets.
- Report cards.
- Fee receipts.
- Bonafide certificates, where enabled.
- Transfer certificates, where approved.
- Study materials.
- Homework and assignments.
- Other authorized student documents.

Every downloadable document should have a proper preview, PDF generation, and print option wherever applicable.

11. Library Management System

Implement a complete library management module with realistic dummy data.

Features:

B2WORLD

- Book inventory.
- Book categories.
- Author and publisher information.
- ISBN.
- Book cover images.
- Total and available stock.
- Book issue and return.
- Student-wise book history.
- Due-date tracking.
- Fine calculation.
- Search and filter.
- Library reports.

Populate the system with at least 20–30 sample books covering science, mathematics, English, Hindi, computers, history, geography, and general knowledge.

Include realistic sample issue and return transactions so the system can be demonstrated properly.

12. Complete ERP Modules & Dummy Data

All major ERP modules must be functional and populated with realistic demonstration data.

The following modules must be included:

Student Management: Admission records, profiles, class allocation, guardian details, academic history, and student documents.

Staff Management: Teacher profiles, employee records, attendance, leaves, payroll, and department management.

Attendance Management: Daily attendance, monthly reports, absence tracking, and attendance percentage.

Fee Management: Fee structures, collection records, pending dues, receipts, discounts, and payment reports.

Examination Management: Exam schedules, question banks, online tests, manual evaluation, marks entry, results, and marksheets.

Timetable Management: Class-wise and teacher-wise timetables, subject allocation, and period scheduling.

Homework Management: Assignment uploads, student submissions, evaluation, and feedback.

Transport Management: Vehicles, drivers, routes, student allocations, and transport fees.

B2WORLD

Inventory Management: School assets, equipment, stationery, and stock records.

Communication Management: Announcements, chat, email, meeting schedules, and notification history.

Certificate Management: Bonafide certificates, transfer certificates, character certificates, and other school-issued documents with authorization and verification.

13. AI Chatbot & Automated Enquiry Management

Implement an intelligent chatbot on the public website.

The chatbot should answer questions about:

- Admission procedures.
- Available classes.
- Fee structure.
- School facilities.
- Academic programs.
- Timings and holidays.
- Contact information.
- Examination information.

It should also collect admission enquiries and direct parents to the admission application form.

Provide an Admin-side chatbot management module for updating FAQs, responses, and escalation settings.

Include WhatsApp enquiry integration as an additional communication channel.

14. SEO, Digital Marketing & Website Conversion Features

The website must be developed keeping modern school marketing and admission-generation standards in mind.

Search Engine Optimization (SEO)

- Editable meta titles and descriptions.
- SEO-friendly URLs.
- XML sitemap.
- Robots.txt.
- Image alt-text management.
- Schema markup for educational institutions.

B2WORLD

- Google Search Console integration.
- Google Analytics 4 integration.
- Social media sharing metadata.
- Blog and educational articles management.

Marketing & Lead Generation

- Admission Open banners.
- Online admission enquiry forms.
- Downloadable school prospectus.
- WhatsApp enquiry buttons.
- Callback request functionality.
- Testimonials and reviews.
- Student achievement highlights.
- Promotional banners.
- Social media integration.
- Newsletter subscription.
- Campaign tracking.
- Enquiry source tracking.
- Lead status management.
- Follow-up reminders for admission counsellors.

The Admin Panel should provide an analytics dashboard showing website visitors, admission enquiries, enquiry conversion rates, popular pages, and lead sources wherever analytics integrations support these metrics.

15. Notification & Alert Management

Implement centralized notifications across all panels.

Notifications should include:

- New admission enquiries.
- Admission application status updates.
- Fee payment reminders.
- Successful fee payment confirmations.
- Attendance alerts.
- Homework notifications.
- Examination announcements.
- Admit card publication.
- Result publication.
- Parent-teacher meeting reminders.
- New chat messages.
- Important school announcements.

Support in-app notifications, email, SMS, and WhatsApp integrations through configurable providers.

B2WORLD

Administrators should be able to manage notification templates and choose which events trigger notifications.

16. Super Admin & Advanced Administrative Controls

The Super Admin should have centralized control over the complete platform.

Required features:

- Manage all user accounts.
- Create and manage Admin accounts.
- Manage teacher, student, and guardian accounts.
- Assign roles and permissions.
- Control module-wise access.
- Manage website content.
- Manage all academic modules.
- Monitor admission enquiries.
- Manage examination publication.
- Approve marksheet publication.
- Manage ID card and certificate templates.
- Configure chat and meeting permissions.
- Review communication audit records.
- Manage notification settings.
- View overall ERP analytics.
- Export reports.
- Manage backup and system settings.

Maintain a complete activity log for important actions such as marks modification, fee updates, admission approvals, document generation, and user permission changes.

17. UI/UX, Security & Technical Standards

The entire platform must follow professional software development and user experience standards.

Design Requirements

- Modern and clean interface.
- Consistent branding across all panels.
- Responsive desktop, tablet, and mobile layouts.
- Professional dashboard cards.
- Interactive charts and graphs.
- Easy navigation.
- Consistent typography and spacing.
- Proper loading indicators.
- Meaningful empty states.

B2WORLD

- Clear error and success messages.
- Professional PDF and print layouts.

Technical & Security Requirements

- Secure authentication and authorization.
- Role-based access control (RBAC).
- Secure password hashing.
- OTP or multi-factor authentication where appropriate.
- Secure file uploads and storage.
- Database backup and recovery.
- API security.
- Protection against common web vulnerabilities.
- SSL/HTTPS.
- Session management.
- Audit logging.
- Data privacy controls.
- Performance optimization.
- Scalable database architecture.

Ensure that student and guardian information, examination records, marksheets, financial information, and internal communication are accessible only to authorized users.

18. Dummy Data & Complete Functional Demonstration

Mandatory delivery requirement

The ERP must not contain empty dashboards, non-functional buttons, or static sample screens.

Populate all modules with realistic demonstration data.

Suggested initial dataset:

Module	Suggested dummy records
Students	100
Teachers	15
Administrative Staff	5
Library Books	30
Admission Enquiries	20
Fee Transactions	50
Attendance Records	Multiple months
Examination Records	2–3 examinations
Assignments	20

B2WORLD

Quiz Questions	50
Timetables	All sample classes
Gallery Images	30–50
News & Events	10–15
Sample Chat Conversations	Multiple role combinations

All sample data must be interconnected.

For example, a student record should be connected with the student's class, guardian, attendance, fee records, examination results, ID card, and library history.

Similarly, teacher records should connect with assigned subjects, classes, examinations, assignments, attendance, and communication records.

Demonstration requirement: Every module must support its relevant operations, including Add, View, Edit, Delete, Search, Filter, Download, Print, and Report Generation.

Use clearly labelled demo accounts and demo data. Do not mix dummy information with real school records during production deployment.

19. Final Expected Deliverables

The development team should deliver the following integrated components:

Public-facing website

Dynamic school website with CMS, gallery, admission forms, SEO, chatbot, and marketing features.

ERP management panels

- Super Admin Panel – complete system control.
- Admin Panel – school operations and management.
- Teacher Panel – academics, examinations, and evaluation.
- Student Panel – academics, ID cards, examinations, and results.
- Parent/Guardian Panel – student monitoring, communication, and downloads.

Specialized modules

ID Card Generation

Admission Management

Library Management

Examination System

B2WORLD

Marksheet Generation

Admit Card Generation

Internal Chat

Google Meet

Calendar Integration

AI Chatbot

Photo & Video Gallery

Analytics Dashboard

Document generation & distribution

- Professional PDF ID cards.
- Admission application forms.
- Examination admit cards.
- Professional marksheets and report cards.
- Fee receipts.
- School certificates.
- Downloadable academic documents.

Integrations

- Google Meet API.
- Google Calendar API.
- WhatsApp Business API or an authorized provider.
- Email and SMS gateways.
- Google Analytics and Search Console.
- Online payment gateway.

20. Additional Future-Ready Features

The architecture should allow future integration of:

1. Biometric Attendance: Automatic student and teacher attendance using biometric devices.
2. RFID Student Cards: Attendance and library transactions through RFID-enabled ID cards.
3. QR-Based Verification: Verify student identity cards, admit cards, and marksheets.
4. AI Academic Analytics: Identify students who need additional academic support based on performance trends.
5. Automated Parent Communication: Automatically notify parents about attendance, fees, homework, and examination updates.

BWORLD

6. Mobile Application: Android and iOS applications for students, parents, and teachers.
7. Online Fee Payment: Secure payment gateway integration with automated receipts.
8. Digital Learning Management: Online courses, recorded lectures, study resources, and assignments.
9. School Bus Tracking: GPS-based vehicle tracking and parent notifications.
10. Alumni Management: Maintain alumni profiles, achievements, and engagement.

These features can be introduced in phases without affecting the existing ERP architecture.

21. Final Instructions to the Development Team

The following points are essential for project completion:

1. All website content must be dynamically editable through the Admin Panel.
2. All user panels must be connected to a centralized database with appropriate access permissions.
3. Every module must have working functionality, not just a UI design.
4. Student and teacher ID cards must be generated automatically using their registered information.
5. Admission forms, admit cards, marksheets, and certificates must have professional school-branded PDF templates.
6. Teachers must be able to upload or create questions, conduct examinations, evaluate answers, and publish marks through an approval workflow.
7. Students and guardians must be able to access and download their respective academic documents.
8. Internal communication and meeting management must be integrated across authorized panels.
9. Google Meet and Google Calendar integrations must use proper authentication and permissions.
10. The Super Admin must have centralized administrative oversight with appropriate privacy and audit controls.
11. The public website must include sufficient high-quality images, a professional photo gallery, and video sections.
12. All modules must include realistic dummy data for client demonstrations.
13. All functionalities must be tested on desktop, tablet, and mobile devices.
14. The system must be optimized for performance, security, SEO, and future scalability.
15. All third-party integrations must be tested using actual credentials before production deployment.

Final Project Vision

The final system should be a complete Smart School Digital Management Ecosystem, not merely a school website with a basic ERP.

EDWORLD

It should combine the school's digital presence, admission generation, academic administration, examination management, student services, parent engagement, teacher collaboration, communication, and reporting into one centralized platform.

The most important expectation is that every user should have a seamless experience:

- Visitors: Discover the school, explore facilities, view photographs, enquire about admissions, and download forms.
- Parents: Monitor their children's academic progress, fees, attendance, examinations, and communicate with teachers.
- Students: Access learning materials, attempt examinations, view results, and download ID cards and admit cards.
- Teachers: Manage classes, upload content, conduct examinations, evaluate students, and communicate with parents.
- Administrators: Manage school operations, website content, admissions, staff, fees, and academic activities.
- Super Admin: Have centralized control, reporting, configuration, and authorized monitoring across the complete ecosystem.

Quality expectation: The final website and ERP should look and function like a professional commercial school management SaaS product, with consistent branding, polished interfaces, reliable workflows, and production-ready functionality.

Development priority: Complete the core website, user panels, admission, academic management, examination, marksheet, and document-generation workflows first. Then complete communication integrations, advanced analytics, and future-ready features. This will make testing and client demonstrations much more effective.

B2WORLD
